DATASHEET

# Toll-Free Buckets – Switch and Save!

**Shared minutes help maximize your usage**
Multiple toll-free numbers can share the same bucket of minutes. Just pick the bucket of the total number of minutes you think your business will need.

**Flat rate pricing for all minutes means a more predictable bill**
In-bucket minutes for calls within the United States and Canada (including Alaska and Hawaii) AND any overage minutes are the same consistent rate.

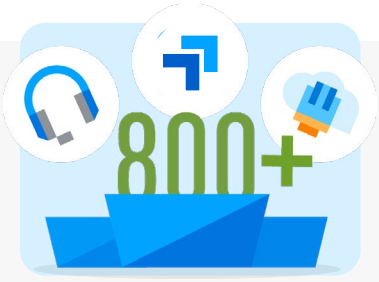
**Your bucket of minutes will last longer**
Other providers charge for calls in one-minute increments, with a minimum call length of one minute. With Elevate, however, calls are metered at 6-second increments, with a minimum call length of 18 seconds, making your minute buckets last longer.

**We make it easy to move your toll-free numbers! Ask how!**

**One consolidated bill for all your Elevate solutions**
Consolidating your communications solutions and bills creates efficiencies and can save you time and money.

## DON'T HAVE A TOLL-FREE NUMBER?

A toll-free number makes your business more accessible to customers regardless of their location. Adding a toll-free number can give a business a more professional image and more credibility. It can help improve customer satisfaction, as customers are more likely to call or text a business if they know they can do so without incurring any additional cost.



Toll-free calling plans are only available for purchase by existing customers of Elevate or Elevate Contact Center.
